

Future Delivery: WGLC Comments

- 1*9Digit
 - Leave as is, same as related standards (delivery-by)
- AUTH requirement redundant
 - Profile for use with SMTP-Submit, which requires AUTH. Don't duplicate or extend requirements, leave for revisions to submit if needed.
 - Add words in security section noting and emphasizing that fact, fix words in 3.2.2
- Requirements Language
 - Need to explicitly indicate the use of RFC 2119 language, not just ref in references
- Minimum FutureDelivery time?
 - Does server need to announce this?

Future Delivery WGLC Comments

Page 2

- Odd cases in max delivery interval
 - Remove zero as a special case. Make zero is same as none. Server can advertise 999999999 if I wants no practical limit
 - Don't allow advertisement without a limit.
- Add DOS to security requirements
- Split normative references, remote 2822
- Various editorial nits from Lyndon

Thanks to all!
